AIR CONDITIONING MAINTENANCE

Whether you have a central air conditioning system, mini-split or heat pump, routine maintenance is an important part of keeping you cool and comfortable as well as extending the efficiency and lifespan of your equipment.

As part of our Spring start-up we will perform the following:

Use coil cleaner and water to wash your outdoor condensing unit.

Flush out drain lines.

Check contactors and electrical connections.

Check refrigerant and make sure your system is properly charged and balanced.

Test condensate pump for proper operation.

Check and replace air filters if required.

Fall shut down includes:

Winterizing your system. This includes closing dampers, filter boxes and protecting items exposed to winter temperatures.

Turn off power to outdoor unit and install condenser cover if available.

We offer by far the most comprehensive A/C tune-up available. Making sure the work is done correctly is most important to us and to you.

As part of our offer to you, we will perform a complete A/C spring start-up and fall shut down for only \$200.00* for the first unit and \$75.00* for each additional unit.

*Prices are labor only. Any parts if needed will be an additional charge.
